***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I, claim(s) 1-11, & 16 drawn to *An amplifier circuit with pure reflection and biasing.*

classified in class 330, subclass 300.

Group II, claim(s) 12-15, drawn to *A low noise amplifier with reduced signal jamming and third order intercept.* classified in class 455, subclass 115.

Inventions an integrated receiver and substarte are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because *The amplifier of group I is not required of group II.* The subcombination has separate utility such as *A low noise amplifier in any electrical circuit.*

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. William Fuess on July 9, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.
